The Scan Interface

User will press start scanning button to scan

The camera will open to scan the qr code.

There is a sample scan code to scan on right side. This is real QR-Code to scan.

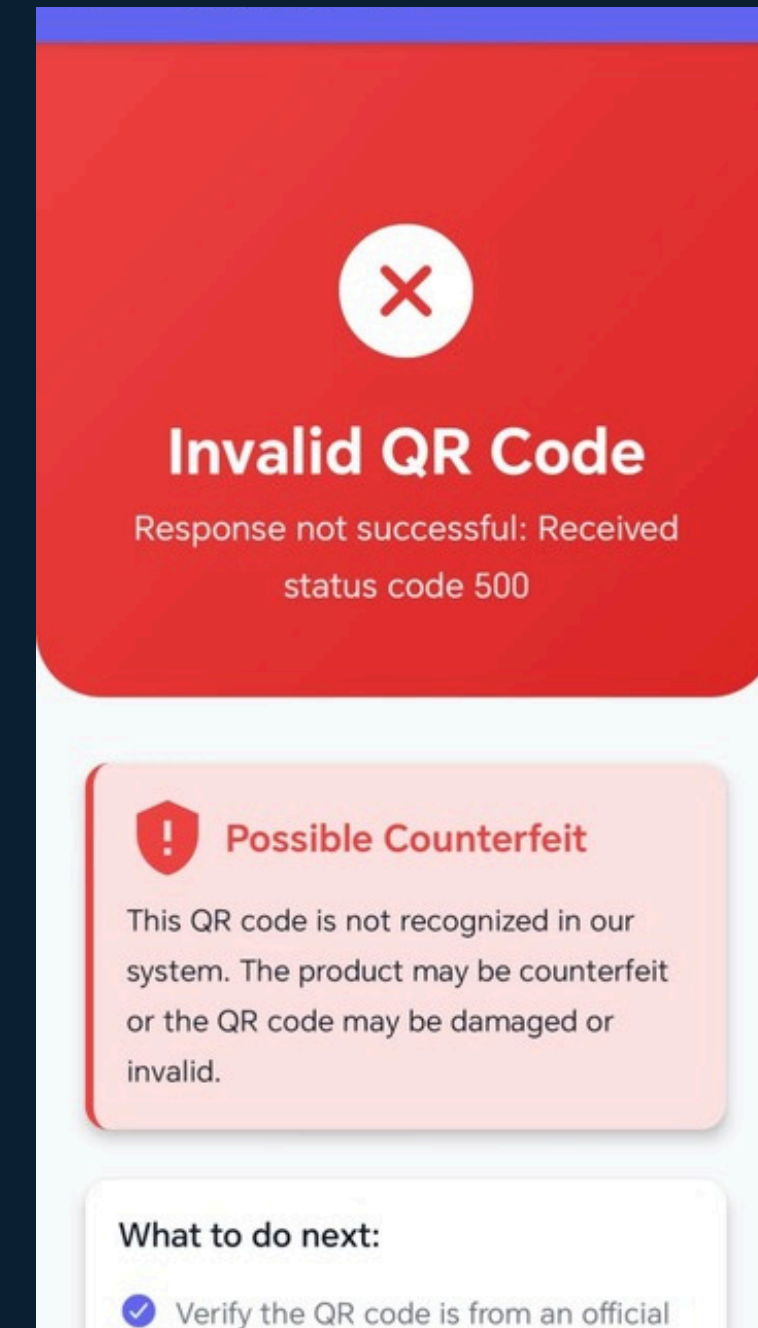

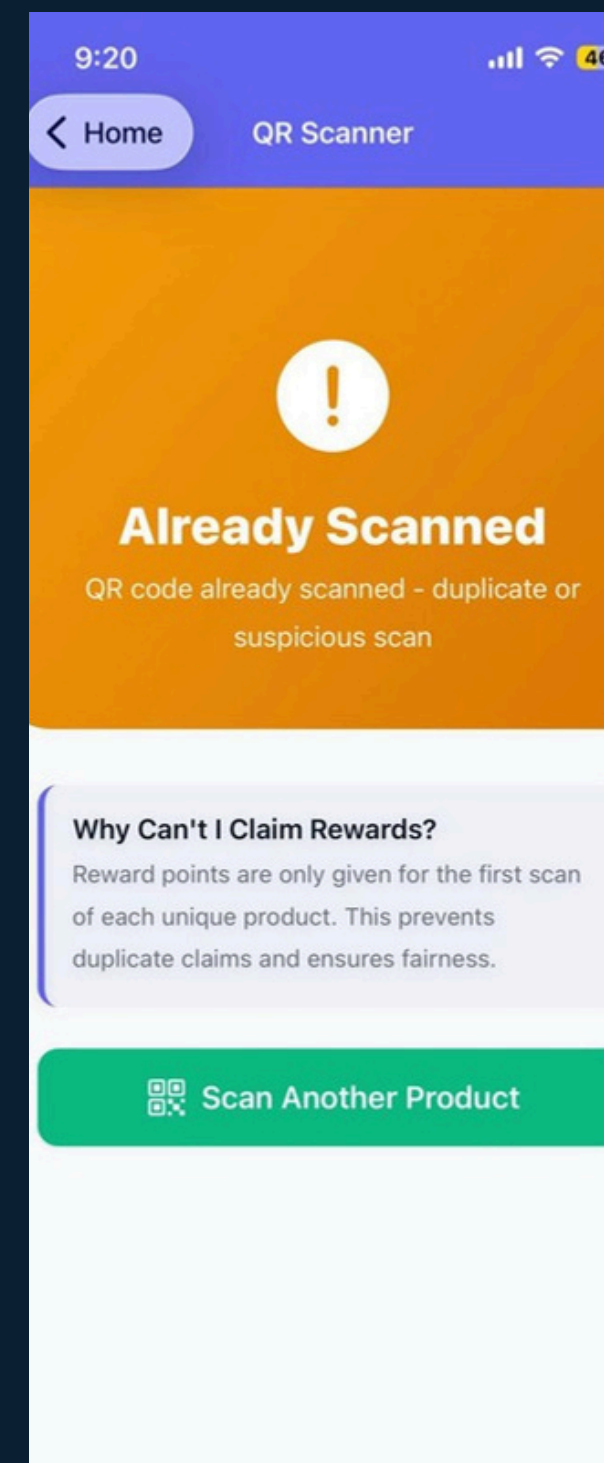

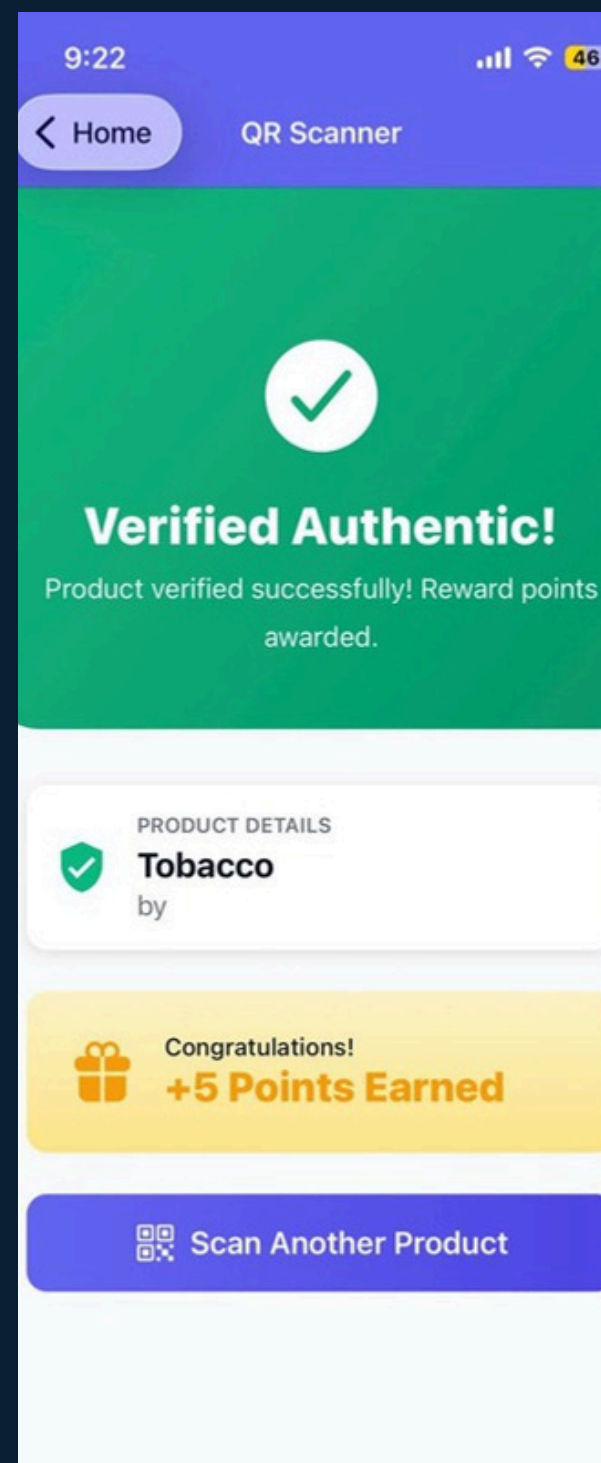

Successful Verification (Genuine)

Scanning an authentic code triggers a "Genuine" status. This screen displays the product's origin, serial number, and an immutable certificate of authenticity for the consumer.

If duplicate qr code it will show relevant message.

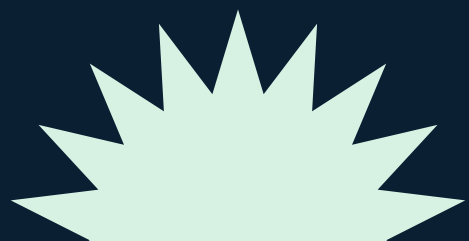

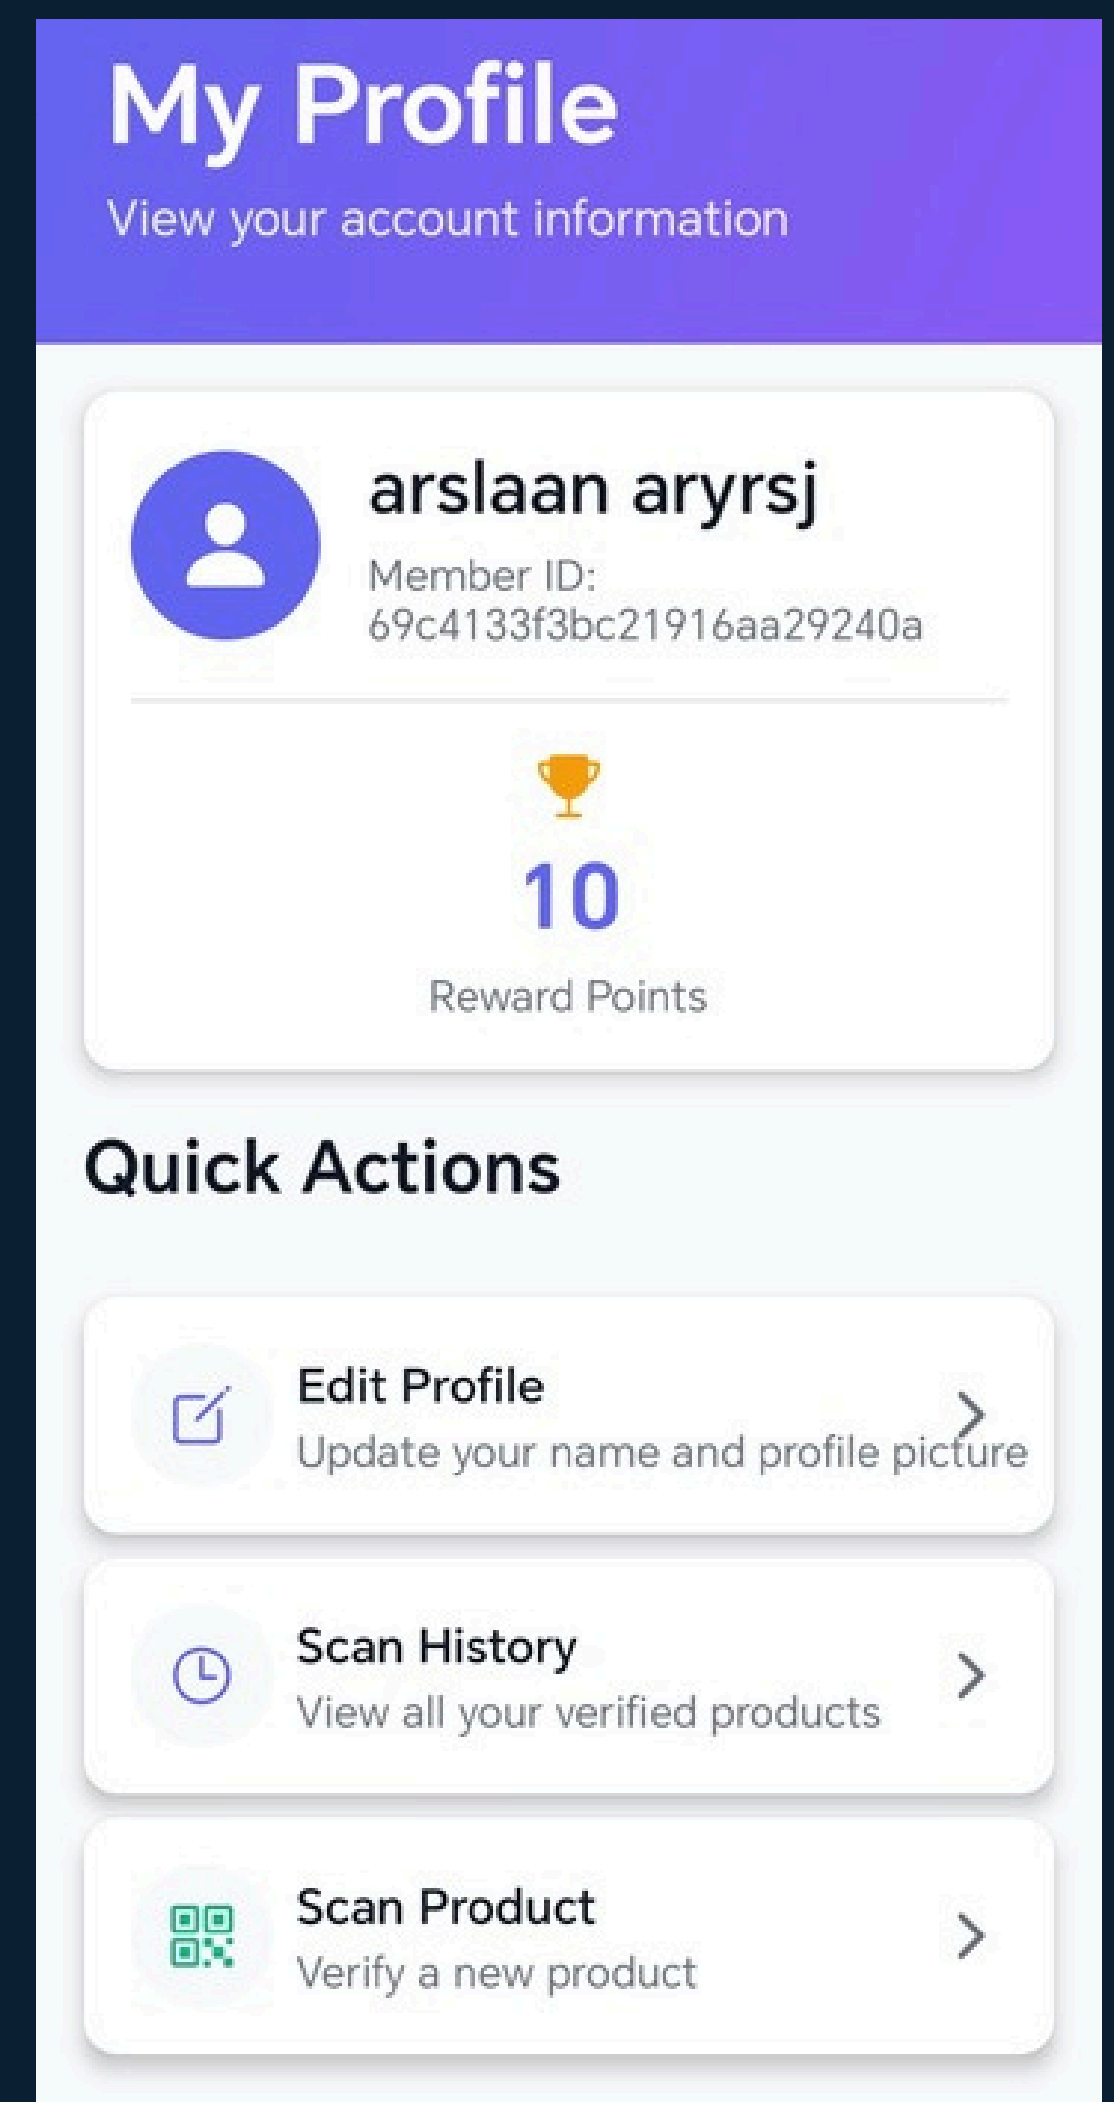

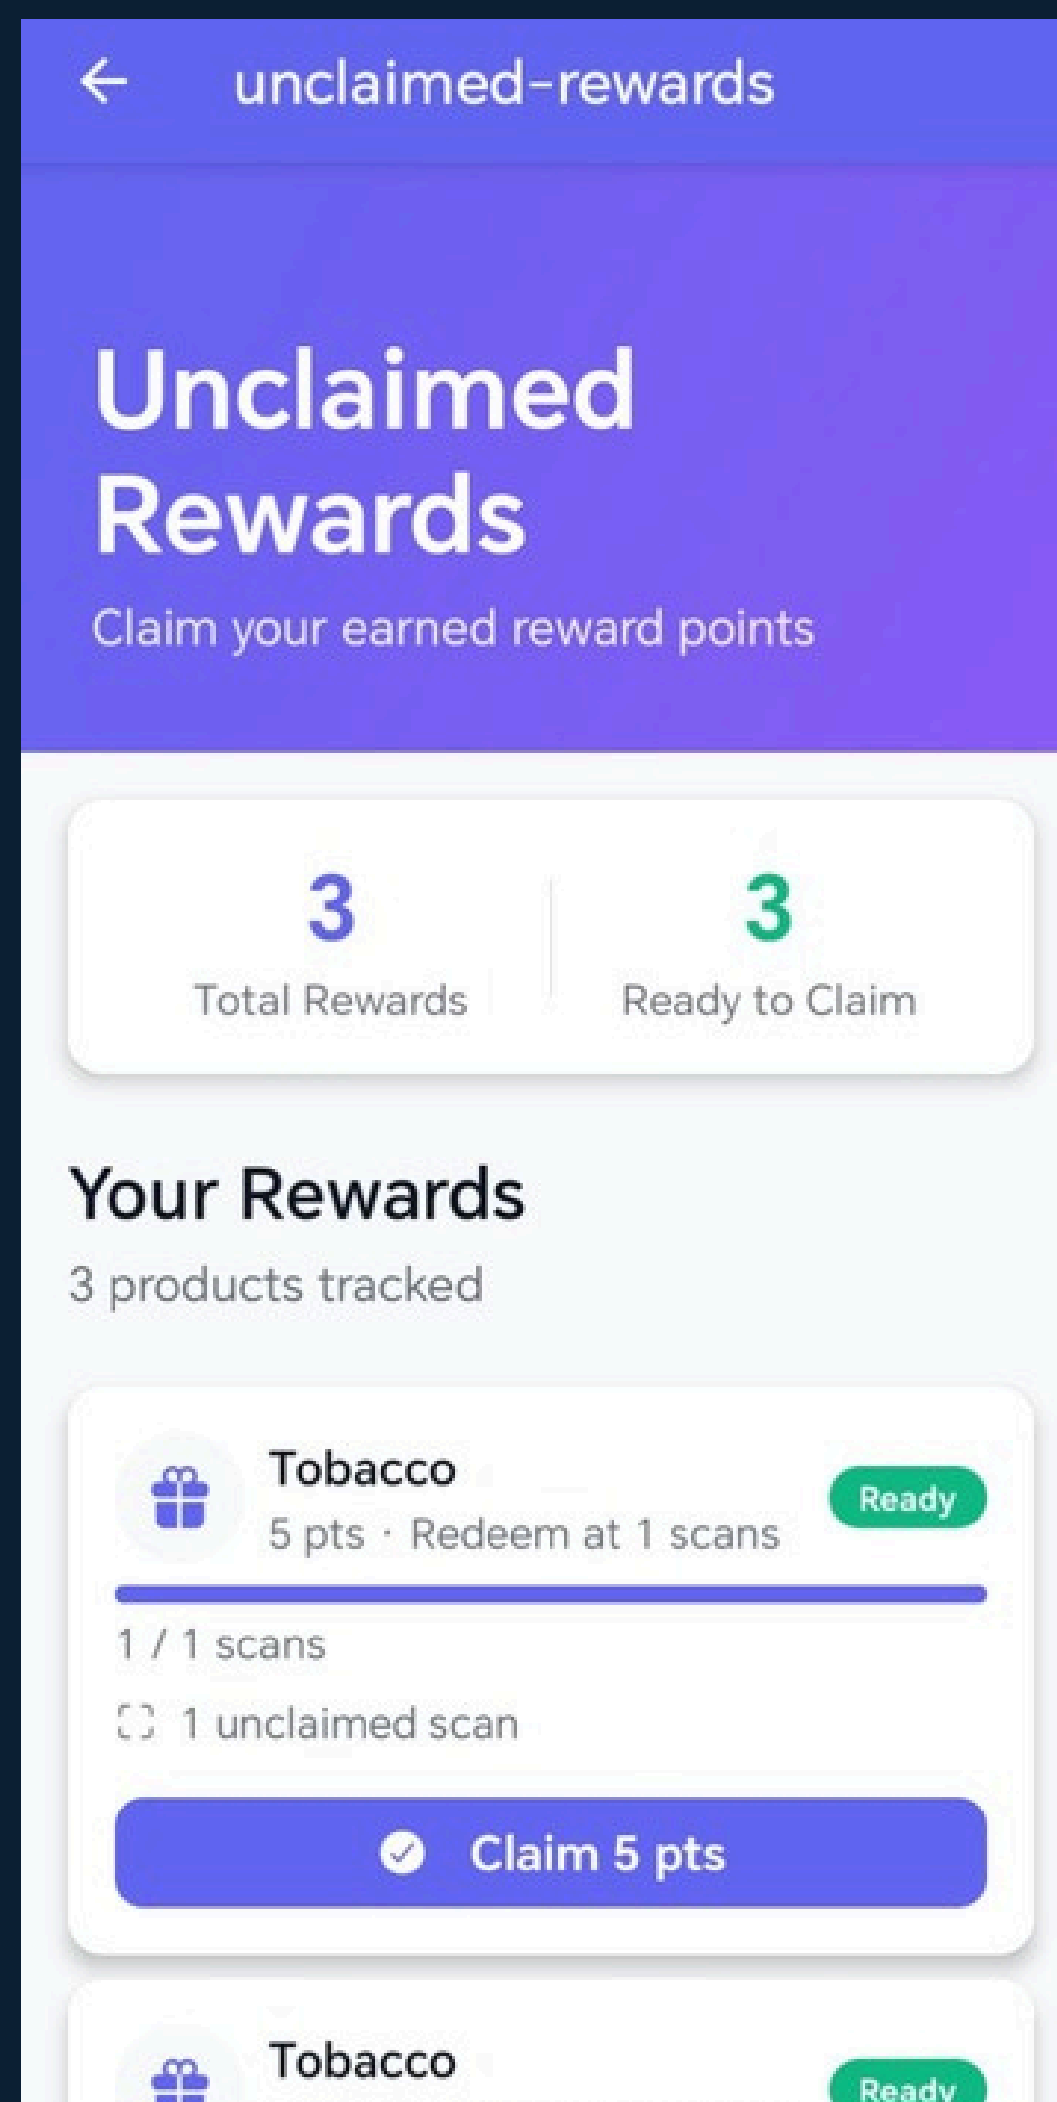

The system identifies unregistered or fraudulent QR codes.

If a code is unrecognized or tampered with, the app displays an "Invalid" warning. This prevents counterfeit products from entering the supply chain and alerts the brand owner.

Consumer Engagement & Rewards

Once a product is verified, the "Direct Promotion" feature activates. Users can claim loyalty rewards, and can see the reward points in profile.

Step-by-Step Demo

Open Scanner

Use the app to scan QR codes

Point Camera

Align camera with the QR code target

Observe Result

Verification results displayed on screen
